

CAPTIONS FOR vmstable.xlsx, vmstable.pdf

Column A: Latin names. A large number of species names have changed in recent years. Old names are labelled as such. The main source for latin names are indexfungorum <http://www.indexfungorum.org> . In some cases our local experts prefer another name that is considered to be synonymous.

Column B: Comments. Common names in *italics*. Sources: "Matchmaker": Mushrooms of the Pacific Northwest. Ian Gibson, Eli Gibson and Bruce Kendrick. Version 2.1 is now available on the web at <http://www.matchmakermushrooms.com> . "The book of fungi" Peter Roberts and Shelley Evans, University of Chicago Press 2011 <http://www.mushroomhunter.net/common%20names.pdf> is another source. In some cases common names are taken from web other sources e.g. the Wikipedia. If the latin name in column A is no longer current a reference is given to the current name. If the latin name replaces a no longer current name this is indicated too. Finally a.k.a. in front of a Latin name indicates that the two names are thought to be synonymous

Column C: Habitat. Habitat or other pertinent facts are taken mostly from "Matchmaker", sometimes "The book of fungi" or various web sources. "Rare" indicates species is listed as candidate for protection in S. Redhead, *Macrofungi of British Columbia: Requirements for Inventory*, working paper 28 1997 Ministry of Forests research program.

Column D: Edibility People react very differently to many mushrooms and edibility of a given species may vary from region to region. For some species "The book of fungi" and various web sources have been relied upon. The main sources of information are the references given in Matchmaker.

Column E: Loc(ation). Specimens at the Fraser Valley and VMS fall shows are separated into Gilled white-spored (W) and dark-spored (D) and non-gilled (O). The number indicates the tray(s) used.

Column F: S(tatus). N(ew) indicates label as in spreadsheet,. O(ld): label exists but not yet changed, D(iscard) label refers to old name redirect given to current name. Blank: label not yet made.

Columns G,H,I,J,K,L,M,NO: 13,12,11,10,9,8,6,5,4,3, Species identified at 2013,2012, 2011, 2010, 2009, 2008, 2006, 2005, 2004, 2003 fall mushroom shows. F Fraser Valley, V van Dusen, Vancouver, R Richmond Nature Park. Microscopic analysis was not available at the shows so there likely are some misidentifications. Currently both new and old names are listed, as well as possible synonyms marked by a.k.a. Adding number of entries does not yield the number of species found.

Column P: 90. List of species prepared by Paul Kruger for the 1990 NAMA convention in Whistler BC.

This spreadsheet is a work in progress. With such a large database errors are inevitable, and the files will be updated occasionally by Birger Bergersen, birger@phas.ubc.ca
